

CLAUDE RUN PROMPTS — MY GUJARAT PROPERTY

PROMPT 00 — START PROJECT RULES

You are working inside my project folder for “My Gujarat Property”.

First confirm that you can access/read the project files. If you cannot access local project files from this Claude session, say exactly: “I cannot access the project folder from here. Please use Claude Code inside the project folder or enable local file access.”

If you can access the files, read these files fully first, without skipping anything:

- CLAUDE.md
- brain.md
- FEATURE_REGISTRY.md
- CHANGELOG.md
- BUGS_AND_FIXES.md
- MANUAL_VERIFICATION.md
- API_PROVIDER_STATUS.md
- DEPLOYMENT_ROLLBACK.md
- SECURITY_RLS_CHECKLIST.md
- PERFORMANCE_CHECKLIST.md
- prompts/00_PROMPT_USAGE_RULES.md

Follow every rule from these files strictly.

Important rules:

- Do not skip, miss, shorten, ignore, or summarize away any requirement from the saved documentation or prompt files.
- For every phase, read the full prompt file from the project folder and execute it completely.
- After every implementation prompt, run the matching manual verification prompt before moving to the next implementation prompt.
- Update all required docs after every phase.
- If anything cannot be completed because provider keys, environment variables, Supabase, RLS tests, payment tests, OTP, SMS, WhatsApp, email, media/CDN, maps, monitoring, backup, production credentials, or test data are missing, mark it honestly as SETUP_REQUIRED, PARTIAL, BLOCKED, NOT_CONFIGURED, or NOT_AVAILABLE.
- Do not fake PASS.
- Do not fake data.
- Do not fake provider success.
- Do not fake payment success.
- Do not fake OTP delivery.
- Do not fake SMS, WhatsApp, email, or push delivery.
- Do not fake media/CDN success.
- Do not fake RLS/security pass.
- Do not fake build/deployment success.
- Do not fake production readiness.
- Do not fake Super Admin signoff.
- Never expose hidden contact, provider secrets, service role keys, private media, private documents, private messages, private leads, private invoices, private provider logs, admin notes, or private routes.

After reading the required files, reply with:

1. Files read.
2. Any missing files.
3. Current project status from brain.md.
4. Next file to run: prompts/01_PROJECT_SETUP_BASELINE.md.

Do not start Prompt 01 until I say "NEXT PROMPT 01".

NEXT PROMPT — PROMPT 01 IMPLEMENTATION

Read and run this file fully from the project folder without skipping or missing anything:
prompts/01_PROJECT_SETUP_BASELINE.md

Execute every requirement in the file completely.

Before coding, read all required docs listed inside that prompt.

Implement the full project setup/baseline phase exactly as written.

Update all required docs:

- brain.md
- FEATURE_REGISTRY.md
- CHANGELOG.md
- BUGS_AND_FIXES.md
- MANUAL_VERIFICATION.md
- API_PROVIDER_STATUS.md
- DEPLOYMENT_ROLLBACK.md
- SECURITY_RLS_CHECKLIST.md
- PERFORMANCE_CHECKLIST.md

Run available checks such as lint, typecheck, build, and tests if configured.

Do not fake completion. Do not mark PASS from implementation alone. If anything is missing, blocked, or setup-required, document it honestly.

End your response with:

- Summary
- Changed files
- SQL migrations
- Docs updated
- Tests/checks run
- Issues found
- Result status
- Next step: run

prompts/01_MANUAL_VERIFICATION_PROJECT_SETUP_BASELINE.md

VERIFICATION PROMPT — PROMPT 01 VERIFICATION

Read and run this file fully from the project folder without skipping or missing anything:
prompts/01_MANUAL_VERIFICATION_PROJECT_SETUP_BASELINE.md

Verify Prompt 01 completely.

Check every baseline/setup requirement honestly.

Update all required docs:

- brain.md
- FEATURE_REGISTRY.md
- CHANGELOG.md
- BUGS_AND_FIXES.md
- MANUAL_VERIFICATION.md
- API_PROVIDER_STATUS.md
- DEPLOYMENT_ROLLBACK.md

- SECURITY_RLS_CHECKLIST.md
- PERFORMANCE_CHECKLIST.md

Do not mark PASS unless verification is real.

If verification is PARTIAL, BLOCKED, FAIL, or SETUP_REQUIRED, document exact reasons, bugs, blockers, and next steps.

End your response with:

- Verification Summary
- Files checked
- Commands run
- Docs updated
- Issues found
- Result
- Can start Prompt 02: Yes/No
- Next step: prompts/02_AUTH_ROLES_RLS_FOUNDATION.md

NEXT PROMPT — PROMPT 02 IMPLEMENTATION

Read and run this file fully from the project folder without skipping or missing anything: prompts/02_AUTH_ROLES_RLS_FOUNDATION.md

Execute every requirement in the file completely.

Implement the full Auth, Roles, Permissions, Admin Login, Public OTP, Profiles, Protected Routes, Supabase/RLS foundation exactly as written.

Do not skip auth guards, public role rules, admin separation, RLS, migrations, docs, or checks.

Update all required docs:

- brain.md
- FEATURE_REGISTRY.md
- CHANGELOG.md
- BUGS_AND_FIXES.md
- MANUAL_VERIFICATION.md
- API_PROVIDER_STATUS.md
- DEPLOYMENT_ROLLBACK.md
- SECURITY_RLS_CHECKLIST.md
- PERFORMANCE_CHECKLIST.md

Run available lint, typecheck, build, and tests if configured.

Do not fake OTP, auth, RLS, role checks, provider setup, or PASS.

End your response with:

- Summary
- Changed files
- SQL migrations
- Auth/roles/RLS status
- Docs updated
- Tests/checks run
- Issues found
- Result status
- Next step: run
prompts/02_MANUAL_VERIFICATION_AUTH_ROLES_RLS_FOUNDATION.md

VERIFICATION PROMPT — PROMPT 02 VERIFICATION

Read and run this file fully from the project folder without skipping or missing anything:

prompts/02_MANUAL_VERIFICATION_AUTH_ROLES_RLS_FOUNDATION.md

Verify Prompt 02 completely.

Check public auth, OTP/register/login, Owner/Broker/Builder roles, admin/staff separate login, route guards, RLS policies, wrong-user denial, provider setup states, direct URL blocking, and docs.

Update all required docs.

Do not mark PASS unless auth, roles, protected routes, admin separation, and RLS verification are real.

End your response with:

- Verification Summary
- Auth checked
- Roles checked
- Admin checked
- RLS checked
- Commands run
- Docs updated
- Issues found
- Result
- Can start Prompt 03: Yes/No
- Next step: prompts/03_PUBLIC_UI_HOME_HEADER_FOOTER_HERO.md

NEXT PROMPT — PROMPT 03 IMPLEMENTATION

Read and run this file fully from the project folder without skipping or missing anything:

prompts/03_PUBLIC_UI_HOME_HEADER_FOOTER_HERO.md

Execute every requirement in the file completely.

Implement the public UI, homepage, header, footer, hero, city selector, public role-aware navigation, responsive UI, mobile-first behavior, no-dead-links, and setup-required states exactly as written.

Do not skip responsive checks, old hero integration rules, role/device header rules, footer rules, docs, or checks.

Update all required docs.

Run available lint, typecheck, build, and tests if configured.

Do not fake UI completion, routes, responsiveness, or PASS.

End your response with:

- Summary
- Changed files
- UI/routes changed
- Responsive status
- Docs updated
- Tests/checks run
- Issues found
- Result status
- Next step: run
prompts/03_MANUAL_VERIFICATION_PUBLIC_UI_HOME_HEADER_FOOTER_HERO.md

VERIFICATION PROMPT — PROMPT 03 VERIFICATION

Read and run this file fully from the project folder without skipping or missing anything:

prompts/03_MANUAL_VERIFICATION_PUBLIC_UI_HOME_HEADER_FOOTER_HERO.md

Verify Prompt 03 completely.

Check homepage, header, footer, hero, city selector, public routes, mobile layout, no horizontal scroll, no dead links, role/device behavior, setup-required states, accessibility basics, and docs.

Update all required docs.

Do not mark PASS unless UI and responsive verification are real.

End your response with:

- Verification Summary
- Routes checked
- UI checked
- Responsive widths checked
- Commands run
- Docs updated
- Issues found
- Result
- Can start Prompt 04: Yes/No
- Next step: prompts/04_PROPERTY_PROJECT_REQUIREMENT_SYSTEM.md

NEXT PROMPT — PROMPT 04 IMPLEMENTATION

Read and run this file fully from the project folder without skipping or missing anything: prompts/04_PROPERTY_PROJECT_REQUIREMENT_SYSTEM.md

Execute every requirement in the file completely.

Implement property posting, project posting, requirement posting, type-specific fields, location hierarchy, media fields, approval workflow, draft/pause/edit/delete behavior, role restrictions, database/RLS, migrations, docs, and checks exactly as written.

Do not skip any property type, project type, requirement flow, role restriction, location rule, approval rule, database migration, or RLS rule.

Update all required docs.

Run available lint, typecheck, build, tests, and migration checks if configured.

Do not fake property/project/requirement data, approval, RLS, or PASS.

End your response with:

- Summary
- Changed files
- SQL migrations
- Property system
- Project system
- Requirement system
- RLS/security
- Docs updated
- Tests/checks run
- Issues found
- Result status
- Next step: run
prompts/04_MANUAL_VERIFICATION_PROPERTY_PROJECT_REQUIREMENT_SYSTEM.md

VERIFICATION PROMPT — PROMPT 04 VERIFICATION

Read and run this file fully from the project folder without skipping or missing anything:

prompts/04_MANUAL_VERIFICATION_PROPERTY_PROJECT_REQUIREMENT_SYSTEM.md

Verify Prompt 04 completely.

Check property/project/requirement forms, type-specific fields, role restrictions, drafts, approvals, pause/resume, edit/delete, location hierarchy, media fields, RLS, migrations, wrong-user access, public/private states, docs, and checks.

Update all required docs.

Do not mark PASS unless property/project/requirement verification is real.

End your response with:

- Verification Summary
- Property checks
- Project checks
- Requirement checks
- Role/RLS checks
- Commands run
- Docs updated
- Issues found
- Result
- Can start Prompt 05: Yes/No
- Next step: prompts/05_PUBLIC_SEARCH_DETAIL_PROFILE_SEO.md

NEXT PROMPT — PROMPT 05 IMPLEMENTATION

Read and run this file fully from the project folder without skipping or missing anything:

prompts/05_PUBLIC_SEARCH_DETAIL_PROFILE_SEO.md

Execute every requirement in the file completely.

Implement public search, filters, result cards, detail pages, public profiles, SEO metadata, schema, canonical/noindex rules, hidden contact protection, public-safe data, save/share/inquiry flows, responsive UI, docs, and checks exactly as written.

Do not skip hidden contact protection, public-safe API responses, metadata/schema safety, mobile search/filter behavior, or RLS.

Update all required docs.

Run available lint, typecheck, build, and tests if configured.

Do not fake counts, views, leads, reviews, SEO data, public contact visibility, or PASS.

End your response with:

- Summary
- Changed files
- Search/detail/profile
- SEO
- Hidden contact protection
- Docs updated
- Tests/checks run
- Issues found
- Result status
- Next step: run
prompts/05_MANUAL_VERIFICATION_PUBLIC_SEARCH_DETAIL_PROFILE_SEO.md

VERIFICATION PROMPT — PROMPT 05 VERIFICATION

Read and run this file fully from the project folder without skipping or missing anything:

prompts/05_MANUAL_VERIFICATION_PUBLIC_SEARCH_DETAIL_PROFILE_SEO.md

Verify Prompt 05 completely.

Check search, filters, params, result cards, property/project detail pages, public profiles, inquiry flow, hidden contact, metadata/schema/canonical/noindex, responsive UI, RLS/public-safe data, docs, and checks.

Update all required docs.

Do not mark PASS unless public search/detail/profile/SEO verification is real.

End your response with:

- Verification Summary
- Search checked
- Detail pages checked
- Profiles checked
- SEO checked
- Hidden contact checked
- Commands run
- Docs updated
- Issues found
- Result
- Can start Prompt 06: Yes/No
- Next step: prompts/06_OWNER_BROKER_BUILDER_DASHBOARDS.md

NEXT PROMPT — PROMPT 06 IMPLEMENTATION

Read and run this file fully from the project folder without skipping or missing anything:

prompts/06_OWNER_BROKER_BUILDER_DASHBOARDS.md

Execute every requirement in the file completely.

Implement Owner, Broker, and Builder dashboards, role-specific modules, dashboard navigation, listings/projects/requirements management, leads summaries, notifications, billing links, support links, responsive cards/tables, docs, and checks exactly as written.

Do not skip role restrictions, dashboard private no-store, wrong-user denial, responsive behavior, or docs.

Update all required docs.

Run available lint, typecheck, build, and tests if configured.

Do not fake analytics, leads, notifications, billing, dashboard counts, or PASS.

End your response with:

- Summary
- Changed files
- Owner dashboard
- Broker dashboard
- Builder dashboard
- Role/RLS security
- Docs updated
- Tests/checks run
- Issues found
- Result status
- Next step: run
prompts/06_MANUAL_VERIFICATION_OWNER_BROKER_BUILDER_DASHBOARDS.md

VERIFICATION PROMPT — PROMPT 06 VERIFICATION

Read and run this file fully from the project folder without skipping or missing anything: prompts/06_MANUAL_VERIFICATION_OWNER_BROKER_BUILDER_DASHBOARDS.md
Verify Prompt 06 completely.

Check Owner, Broker, Builder dashboards, role-specific access, dashboard modules, wrong-role denial, private cache/no-store, mobile layout, dashboard links/actions, docs, and checks.

Update all required docs.

Do not mark PASS unless dashboard verification is real.

End your response with:

- Verification Summary
- Owner checked
- Broker checked
- Builder checked
- Role/RLS checked
- Responsive checked
- Commands run
- Docs updated
- Issues found
- Result
- Can start Prompt 07: Yes/No
- Next step: prompts/07_ADMIN_STAFF_SUPER_ADMIN_SYSTEM.md

NEXT PROMPT — PROMPT 07 IMPLEMENTATION

Read and run this file fully from the project folder without skipping or missing anything: prompts/07_ADMIN_STAFF_SUPER_ADMIN_SYSTEM.md

Execute every requirement in the file completely.

Implement Admin, Staff, Super Admin system, separate admin login, invite-only admin/staff, permissions, moderation queues, audit logs, system/provider controls, staff role boundaries, maker-checker where applicable, docs, and checks exactly as written.

Do not skip admin separation, no public admin signup, staff permissions, audit logs, direct URL denial, provider secret protection, RLS, or docs.

Update all required docs.

Run available lint, typecheck, build, tests, and migration checks if configured.

Do not fake admin access, permissions, audit logs, provider status, or PASS.

End your response with:

- Summary
- Changed files
- SQL migrations
- Admin/staff/Super Admin
- Permissions/audit
- Security/RLS
- Docs updated
- Tests/checks run
- Issues found
- Result status

- Next step: run
prompts/07_MANUAL_VERIFICATION_ADMIN_STAFF_SUPER_ADMIN_SYSTEM.md

VERIFICATION PROMPT — PROMPT 07 VERIFICATION

Read and run this file fully from the project folder without skipping or missing anything:
prompts/07_MANUAL_VERIFICATION_ADMIN_STAFF_SUPER_ADMIN_SYSTEM.md

Verify Prompt 07 completely.

Check admin login separation, invite-only staff, permissions, moderation modules, Super Admin controls, audit logs, direct URL denial, staff restriction, provider secret masking, RLS, docs, and checks.

Update all required docs.

Do not mark PASS unless admin/staff/Super Admin verification is real.

End your response with:

- Verification Summary
- Admin checked
- Staff checked
- Super Admin checked
- Permissions/audit checked
- Security/RLS checked
- Commands run
- Docs updated
- Issues found
- Result
- Can start Prompt 08: Yes/No
- Next step:
prompts/08_LEADS_CRM_REQUIREMENTS_PROPOSALS_MESSAGES.md

NEXT PROMPT — PROMPT 08 IMPLEMENTATION

Read and run this file fully from the project folder without skipping or missing anything:
prompts/08_LEADS_CRM_REQUIREMENTS_PROPOSALS_MESSAGES.md

Execute every requirement in the file completely.

Implement leads, CRM, requirements matching, proposals, messages, site visits, saved items/searches, notifications foundation links, privacy, participant-only access, RLS, docs, and checks exactly as written.

Do not skip duplicate inquiry prevention, contact privacy, CRM stages, proposal statuses, message privacy, site visit workflow, RLS, or docs.

Update all required docs.

Run available lint, typecheck, build, tests, and migration checks if configured.

Do not fake leads, messages, proposals, site visits, notifications, analytics, or PASS.

End your response with:

- Summary
- Changed files
- SQL migrations
- Leads/CRM
- Proposals/messages/site visits
- Privacy/RLS
- Docs updated
- Tests/checks run

- Issues found
- Result status
- Next step: run
prompts/08_MANUAL_VERIFICATION_LEADS_CRM_REQUIREMENTS_PROPOSALS_MESSAGES.md

VERIFICATION PROMPT — PROMPT 08 VERIFICATION

Read and run this file fully from the project folder without skipping or missing anything:
prompts/08_MANUAL_VERIFICATION_LEADS_CRM_REQUIREMENTS_PROPOSALS_MESSAGES.md

Verify Prompt 08 completely.

Check leads, duplicate prevention, CRM stages, proposals, messages, site visits, saved items/searches, participant privacy, hidden contact, wrong-user denial, RLS, notifications, docs, and checks.

Update all required docs.

Do not mark PASS unless leads/CRM/messages verification is real.

End your response with:

- Verification Summary
- Leads checked
- CRM checked
- Proposals/messages checked
- Site visits checked
- Privacy/RLS checked
- Commands run
- Docs updated
- Issues found
- Result
- Can start Prompt 09: Yes/No
- Next step: prompts/09_BILLING_PAYMENT_SUBSCRIPTION_TRIAL_GST.md

NEXT PROMPT — PROMPT 09 IMPLEMENTATION

Read and run this file fully from the project folder without skipping or missing anything:
prompts/09_BILLING_PAYMENT_SUBSCRIPTION_TRIAL_GST.md

Execute every requirement in the file completely.

Implement billing, subscription plans, trials, coupons, add-ons, Razorpay order/webhook foundation, verified payment activation, invoices, GST, refunds/credit notes foundation, plan gates, RLS, docs, and checks exactly as written.

Do not skip webhook verification, idempotency, invoice sequence, GST status, plan gates, wrong-user billing denial, provider setup states, or docs.

Update all required docs.

Run available lint, typecheck, build, tests, and migration checks if configured.

Do not fake payment success, invoice, Razorpay status, subscription activation, GST, or PASS.

End your response with:

- Summary
- Changed files
- SQL migrations
- Billing/subscription
- Razorpay/webhook

- GST/invoices
- RLS/security
- Provider/setup-required
- Docs updated
- Tests/checks run
- Issues found
- Result status
- Next step: run
prompts/09_MANUAL_VERIFICATION_BILLING_PAYMENT_SUBSCRIPTION_TRIAL_GST.md

VERIFICATION PROMPT — PROMPT 09 VERIFICATION

Read and run this file fully from the project folder without skipping or missing anything:
prompts/09_MANUAL_VERIFICATION_BILLING_PAYMENT_SUBSCRIPTION_TRIAL_GST.md

Verify Prompt 09 completely.

Check plans, trials, coupons, checkout, Razorpay webhook signature/idempotency, payment activation only after webhook, invoices, GST, refunds/credit notes status, wrong-user billing denial, RLS, docs, and checks.

Update all required docs.

Do not mark PASS unless billing/payment verification is real.

End your response with:

- Verification Summary
- Billing checked
- Payment/webhook checked
- GST/invoice checked
- RLS/security checked
- Provider status checked
- Commands run
- Docs updated
- Issues found
- Result
- Can start Prompt 10: Yes/No
- Next step: prompts/10_MEDIA_STORAGE_UPLOADS_R2_CDN.md

NEXT PROMPT — PROMPT 10 IMPLEMENTATION

Read and run this file fully from the project folder without skipping or missing anything:
prompts/10_MEDIA_STORAGE_UPLOADS_R2_CDN.md

Execute every requirement in the file completely.

Implement media upload/storage, Cloudflare R2/CDN foundation, image/video/PDF handling, variants, private documents, signed URLs, public/private buckets, media cleanup, security validation, RLS, docs, and checks exactly as written.

Do not skip file validation, private media protection, hidden contact metadata protection, signed URL rules, provider setup states, RLS, or docs.

Update all required docs.

Run available lint, typecheck, build, tests, and migration checks if configured.

Do not fake upload, media processing, CDN, private signed URLs, malware scan, or PASS.

End your response with:

- Summary
- Changed files
- SQL migrations
- Media upload
- R2/CDN/storage
- Private docs/signed URLs
- RLS/security
- Provider/setup-required
- Docs updated
- Tests/checks run
- Issues found
- Result status
- Next step: run

prompts/10_MANUAL_VERIFICATION_MEDIA_STORAGE_UPLOADS_R2_CDN.md

VERIFICATION PROMPT — PROMPT 10 VERIFICATION

Read and run this file fully from the project folder without skipping or missing anything:

prompts/10_MANUAL_VERIFICATION_MEDIA_STORAGE_UPLOADS_R2_CDN.md

Verify Prompt 10 completely.

Check upload validation, images/videos/PDFs, variants, public/private media, signed URLs, wrong-user denial, R2/CDN status, hidden contact metadata, malware/setup-required, RLS, docs, and checks.

Update all required docs.

Do not mark PASS unless media/storage verification is real.

End your response with:

- Verification Summary
- Upload checked
- Media/CDN checked
- Private docs checked
- Signed URLs checked
- RLS/security checked
- Commands run
- Docs updated
- Issues found
- Result
- Can start Prompt 11: Yes/No
- Next step: prompts/11_LOCATION_SEARCH_SEO_CMS_LEGAL.md

NEXT PROMPT — PROMPT 11 IMPLEMENTATION

Read and run this file fully from the project folder without skipping or missing anything:

prompts/11_LOCATION_SEARCH_SEO_CMS_LEGAL.md

Execute every requirement in the file completely.

Implement location hierarchy, Gujarat location data foundation, search enhancements, SEO landing pages, sitemap/robots, CMS/blog/legal pages, redirects, missing location flow, privacy/legal setup-required states, RLS, docs, and checks exactly as written.

Do not skip canonical/noindex rules, hidden contact SEO protection, sitemap private exclusion, legal placeholder honesty, CMS sanitizer, location approval, RLS, or docs.

Update all required docs.

Run available lint, typecheck, build, tests, and migration checks if configured.

Do not fake SEO counts, legal final status, location data, schema reviews, sitemap entries, or PASS.

End your response with:

- Summary
- Changed files
- SQL migrations
- Location/search
- SEO/sitemap/robots
- CMS/blog/legal
- RLS/security
- Docs updated
- Tests/checks run
- Issues found
- Result status
- Next step: run
prompts/11_MANUAL_VERIFICATION_LOCATION_SEARCH_SEO_CMS_LEGAL.md

VERIFICATION PROMPT — PROMPT 11 VERIFICATION

Read and run this file fully from the project folder without skipping or missing anything:

prompts/11_MANUAL_VERIFICATION_LOCATION_SEARCH_SEO_CMS_LEGAL.md

Verify Prompt 11 completely.

Check location hierarchy, missing location requests, search params/filters, SEO metadata/canonical/noindex, sitemap/robots, CMS/blog/legal pages, redirects, hidden contact, schema, RLS, docs, and checks.

Update all required docs.

Do not mark PASS unless location/search/SEO/CMS/legal verification is real.

End your response with:

- Verification Summary
- Location checked
- Search checked
- SEO checked
- CMS/legal checked
- RLS/security checked
- Commands run
- Docs updated
- Issues found
- Result
- Can start Prompt 12: Yes/No
- Next step: prompts/12_ADS_PROMOTION_NOTIFICATIONS_PROVIDERS.md

NEXT PROMPT — PROMPT 12 IMPLEMENTATION

Read and run this file fully from the project folder without skipping or missing anything:

prompts/12_ADS_PROMOTION_NOTIFICATIONS_PROVIDERS.md

Execute every requirement in the file completely.

Implement ads, promotions, builder ad campaigns, campaign approval, sponsored labels, city targeting, payment/RERA/project gates, ad metrics foundation, notifications, unread count, notification preferences/templates, provider registry/status, provider

setup-required states, provider logs/retries/webhooks, RLS, docs, and checks exactly as written.

Do not skip sponsored labels, payment/RERA gates, real metrics/no-data, notification recipient privacy, provider secret masking, setup-required states, RLS, or docs.

Update all required docs.

Run available lint, typecheck, build, tests, and migration checks if configured.

Do not fake ads, impressions, clicks, unread count, provider delivery, email/SMS/WhatsApp/push, or PASS.

End your response with:

- Summary
- Changed files
- SQL migrations
- Ads/promotions
- Notifications
- Providers
- RLS/security
- Provider/setup-required
- Docs updated
- Tests/checks run
- Issues found
- Result status
- Next step: run

prompts/12_MANUAL_VERIFICATION_ADS_PROMOTION_NOTIFICATIONS_PROVIDERS.md

VERIFICATION PROMPT — PROMPT 12 VERIFICATION

Read and run this file fully from the project folder without skipping or missing anything: prompts/12_MANUAL_VERIFICATION_ADS_PROMOTION_NOTIFICATIONS_PROVIDERS.md

Verify Prompt 12 completely.

Check builder-only ads, own published project gate, RERA/payment gates, sponsored labels, ad metrics real/no-data, notification center, unread count, recipient privacy, provider modes/status, provider secrets, provider logs/retries/webhooks, RLS, docs, and checks.

Update all required docs.

Do not mark PASS unless ads/notifications/providers verification is real.

End your response with:

- Verification Summary
- Ads checked
- Notifications checked
- Providers checked
- Secrets checked
- RLS/security checked
- Commands run
- Docs updated
- Issues found
- Result
- Can start Prompt 13: Yes/No

- Next step: prompts/13_SECURITY_PRIVACY_FRAUD_RATE_LIMITS.md

NEXT PROMPT — PROMPT 13 IMPLEMENTATION

Read and run this file fully from the project folder without skipping or missing anything:
prompts/13_SECURITY_PRIVACY_FRAUD_RATE_LIMITS.md

Execute every requirement in the file completely.

Implement security hardening, privacy protection, route/API guard review, RLS final pass foundation, hidden contact protection, provider secret/service role protection, validation, sanitizer, CSP/headers, CORS/CSRF/SSRF/open redirect protection, rate limits, fraud/spam/scraping foundations, audit/log redaction, backup/incident docs, RLS, docs, and checks exactly as written.

Do not skip route inventory, API classification, hidden contact scan, service role scan, provider secret scan, private media/docs, webhook security, rate limits, fraud foundation, RLS, or docs.

Update all required docs.

Run available lint, typecheck, build, tests, security checks, and migration checks if configured.

Do not fake security, rate limits, fraud protection, RLS pass, backup readiness, incident readiness, or PASS.

End your response with:

- Summary
- Changed files
- SQL migrations
- Route/API security
- RLS/database
- Privacy/secrets
- Rate limits/fraud
- Audit/incident/backup
- Docs updated
- Tests/checks run
- Issues found
- Result status
- Next step: run
prompts/13_MANUAL_VERIFICATION_SECURITY_PRIVACY_FRAUD_RATE_LIMITS.md

VERIFICATION PROMPT — PROMPT 13 VERIFICATION

Read and run this file fully from the project folder without skipping or missing anything:
prompts/13_MANUAL_VERIFICATION_SECURITY_PRIVACY_FRAUD_RATE_LIMITS.md

Verify Prompt 13 completely.

Check route/API guards, role/admin boundaries, direct URL denial, RLS, hidden contact, private media/docs, provider secrets, service role, validation, XSS/CMS sanitizer, security headers/CSP/CORS/CSRF/SSRF/open redirect, rate limits, fraud/spam/scraping, webhooks, audit/log redaction, backup/incident docs, and checks.

Update all required docs.

Do not mark PASS unless security/privacy/RLS verification is real.

End your response with:

- Verification Summary

- Route/API security checked
- RLS checked
- Hidden contact checked
- Secrets/service role checked
- Rate limits/fraud checked
- Webhooks/security checked
- Commands run
- Docs updated
- Issues found
- Result
- Can start Prompt 14: Yes/No
- Next step: prompts/14_PERFORMANCE_CACHING_DEPLOYMENT_LAUNCH.md

NEXT PROMPT — PROMPT 14 IMPLEMENTATION

Read and run this file fully from the project folder without skipping or missing anything:
prompts/14_PERFORMANCE_CACHING_DEPLOYMENT_LAUNCH.md

Execute every requirement in the file completely.

Implement performance, caching, public cache, private no-store, Next.js revalidation/cache strategy, CDN/media performance, DB indexes/query optimization, RLS performance review, bundle optimization, env validation, feature flags, maintenance mode, deployment checklist, rollback playbook, monitoring/health foundation, launch freeze checklist, docs, and checks exactly as written.

Do not skip private cache safety, signed URL cache prevention, sitemap/private route exclusion, build gates, rollback docs, provider status, RLS/security retention, or docs. Update all required docs.

Run available lint, typecheck, build, tests, performance checks, and migration checks if configured.

Do not fake Core Web Vitals, load tests, deployment, monitoring, rollback readiness, launch readiness, or PASS.

End your response with:

- Summary
- Changed files
- SQL migrations
- Performance
- Caching
- Database/query
- Deployment
- Monitoring/launch
- Security retained
- Docs updated
- Tests/checks run
- Issues found
- Launch readiness status
- Next step: run
prompts/14_MANUAL_VERIFICATION_PERFORMANCE_CACHING_DEPLOYMENT_LAUNCH.md

VERIFICATION PROMPT — PROMPT 14 VERIFICATION

Read and run this file fully from the project folder without skipping or missing anything:

prompts/14_MANUAL_VERIFICATION_PERFORMANCE_CACHING_DEPLOYMENT_LAUNCH.md

Verify Prompt 14 completely.

Check performance, public pages, private no-store, signed URL cache, cache tags/revalidation, DB indexes, unbounded queries, search/detail/dashboard/admin performance, media/CDN, bundle, env validation, provider status, feature flags, deployment checklist, rollback, monitoring/health, launch freeze, smoke checklist, security retained, docs, and checks.

Update all required docs.

Do not mark PASS unless performance/caching/deployment verification is real.

End your response with:

- Verification Summary
- Performance checked
- Caching checked
- DB/query checked
- Deployment checked
- Rollback checked
- Launch readiness checked
- Commands run
- Docs updated
- Issues found

- Next step: prompts/15_FINAL_PRODUCTION_API_TESTING_AND_SIGNOFF.md

NEXT PROMPT — PROMPT 15 IMPLEMENTATION

Read and run this file fully from the project folder without skipping or missing anything: prompts/15_FINAL_PRODUCTION_API_TESTING_AND_SIGNOFF.md

Execute every requirement in the file completely.

Prepare the final production API testing and signoff readiness package exactly as written.

Prepare final provider/API status, final test matrices, route smoke checklist, API smoke checklist, role matrix, RLS matrix, hidden contact checklist, private sitemap/cache checklist, fake data cleanup checklist, test mode cleanup checklist, security/performance regression checklist, rollback checklist, backup checklist, launch freeze package, known limitations, Super Admin signoff package, docs, and checks. Do not fake provider success, API success, payment, OTP, email/SMS/WhatsApp, media/CDN, analytics, monitoring, RLS, rollback, production readiness, or Super Admin signoff.

Update all required docs.

Run available lint, typecheck, build, tests, and final checks if configured.

Do not mark production ready from implementation alone.

End your response with:

- Summary
- Changed files
- SQL migrations
- Final provider/API status

- Final test matrices prepared
- Fake/demo/test cleanup
- Launch readiness
- Security retained
- Commands/checks run
- Docs updated
- Issues found
- Final readiness status
- Next step: run
prompts/15_MANUAL_VERIFICATION_FINAL_PRODUCTION_API_TESTING_AND_SIGNOFF.md

VERIFICATION PROMPT — PROMPT 15 FINAL VERIFICATION

Read and run this file fully from the project folder without skipping or missing anything:
prompts/15_MANUAL_VERIFICATION_FINAL_PRODUCTION_API_TESTING_AND_SIGNOFF.md

This is the final gate.

Verify everything honestly:

- final provider/API status
- Supabase Auth
- Supabase Database/RLS
- Storage/R2/CDN
- Razorpay
- GST/invoice
- OTP
- Email
- SMS
- WhatsApp
- Push
- Maps/geocoding
- Analytics/GSC
- Error monitoring
- Captcha/WAF
- Cron/jobs
- Malware scan
- Backup
- Hosting/deployment
- route smoke
- API smoke
- role matrix
- RLS matrix
- hidden contact
- private sitemap/robots
- private cache/no-store
- fake/mock/demo/test-mode cleanup
- user journeys
- payment journey
- media journey

- lead/CRM/message journey
- ads/notifications journey
- CMS/SEO/legal journey
- support/grievance/privacy journey
- security regression
- performance regression
- browser/device checks
- rollback
- backup
- launch freeze
- known limitations
- blockers
- Super Admin signoff

Update all required docs:

- brain.md
- FEATURE_REGISTRY.md
- CHANGELOG.md
- BUGS_AND_FIXES.md
- MANUAL_VERIFICATION.md
- API_PROVIDER_STATUS.md
- DEPLOYMENT_ROLLBACK.md
- SECURITY_RLS_CHECKLIST.md
- PERFORMANCE_CHECKLIST.md

Do not mark PRODUCTION_READY_AFTER_SIGNOFF unless:

- final manual verification passes,
- no critical blocker remains,
- provider/API/security/RLS/payment/cache status is acceptable,
- known limitations are documented,
- rollback/backup are accepted,
- and Super Admin signoff is explicit with approver name, role, date/time IST, decision, and notes.

If Super Admin signoff is missing, the highest allowed result is READY_FOR_SUPER_ADMIN_REVIEW.

Do not fake final PASS.

End your response with:

- Final Verification Summary
- Environment
- Files checked
- Provider/API status
- Commands run
- Route smoke
- API smoke
- Role matrix
- RLS/security
- Privacy/cache/SEO
- Fake/demo/test cleanup
- User journeys

- Performance
- Browser/device
- Deployment/rollback
- Known limitations
- Issues/blockers
- Docs updated
- Super Admin signoff
- Final Result
- Launch Allowed: Yes/No
- Reason
- Next step
